

Technical data sheet AVEMA ODP-N

Organic N-fertilizer 13 – 0 - 0		
Using collagen (art. 10 cat. 3 EG-VO 1069/2009 and according to DüMV annex 2 table 7.2.1)		
	Einheit	Value
Total nitrogen (N)	[%]	11
Total phosphate(P ₂ O ₅)	[%]	0
Total potassium oxide (K ₂ O)	[%]	0
Organic substance	[%]	86,1 i.t.dm. Contains a lot of organic matter
PH value		5,17
Humidity upon delivery	[%]	appr. 20
C/N ratio		3,7
Net mass of sacked goods	[kg]	20
Net mass big bag	[kg]	1.000
Manufacturer		
AVEMA Polska Sp. z o.o.		
ul. Mostowa 1, PL 59-700 Boleslawiec

Status	March 2023	
FiBL listed and approved for organic farming according to EU organic legislation		
Exam standard	Restriction	Validity date
EU organic legislation	-	31.01.2024
Equipment list Germany	-	31.01.2024
Ecovin Germany	-	31.01.2024
Naturland Germany	-	31.01.2024

Raw material	100 % collagen as an animal by-product
General information on storage and use	The product should be stored in the original packaging in a cool, dry place away from light. AVEMA ODP-N pellets have a shelf life of at least 12 months from the delivery date. After opening the original packaging, the net mass may decrease or increase due to moisture. After being introduced into the ground and watered, the AVEMA ODP-N automatically creates its ideal state of action. During storage, transport and application, precautions should be taken to avoid ingestion by livestock. It is not allowed to mix the fertilizer with animal feed. In order to have an ideal effect, the fertilizer should be slightly worked into the soil after application. After application, the green areas should be well watered. After fertilization, animals must be denied access for at least 21 days after application.
Storage and application instructions for use and fertilization in the house and small garden area	Instructions for use: Green areas, ornamental lawns, sports lawns etc. water sufficiently after application and ideally work the pellets into the soil. It is not allowed to mix the fertilizer with animal feed.

Description	
<p>AVEMA ODP-N is an organic fertilizer pellet made from organic natural fibres. It promotes soil life and is proven in plants, vegetables and fruit growing. AVEMA ODP-N is a slow-acting long-term fertilizer and therefore ideal for longer cultivation periods, as a basic nitrogen fertilization, for viticulture, tree nurseries and depot fertilization. Added to this is the extraordinary moisture-regulating interaction of the AVEMA ODP pellets. With its remarkable moisture regulation, the pellet can store many times its own weight in water. Due to its structure and fiber composition, ODP improves the soil conditions and loosens them up. Due to their size, the pellets are well suited for manual application and for small and medium-sized throwing distances. In addition, the AVEMA ODP-N can be introduced as a depot and thus provides the culture with a continuous, long-lasting source of nitrogen. The AVEMA ODP pellet is produced using a special process, without any polymer layers, additives or pelleting aids.</p>
